

Information Accountability

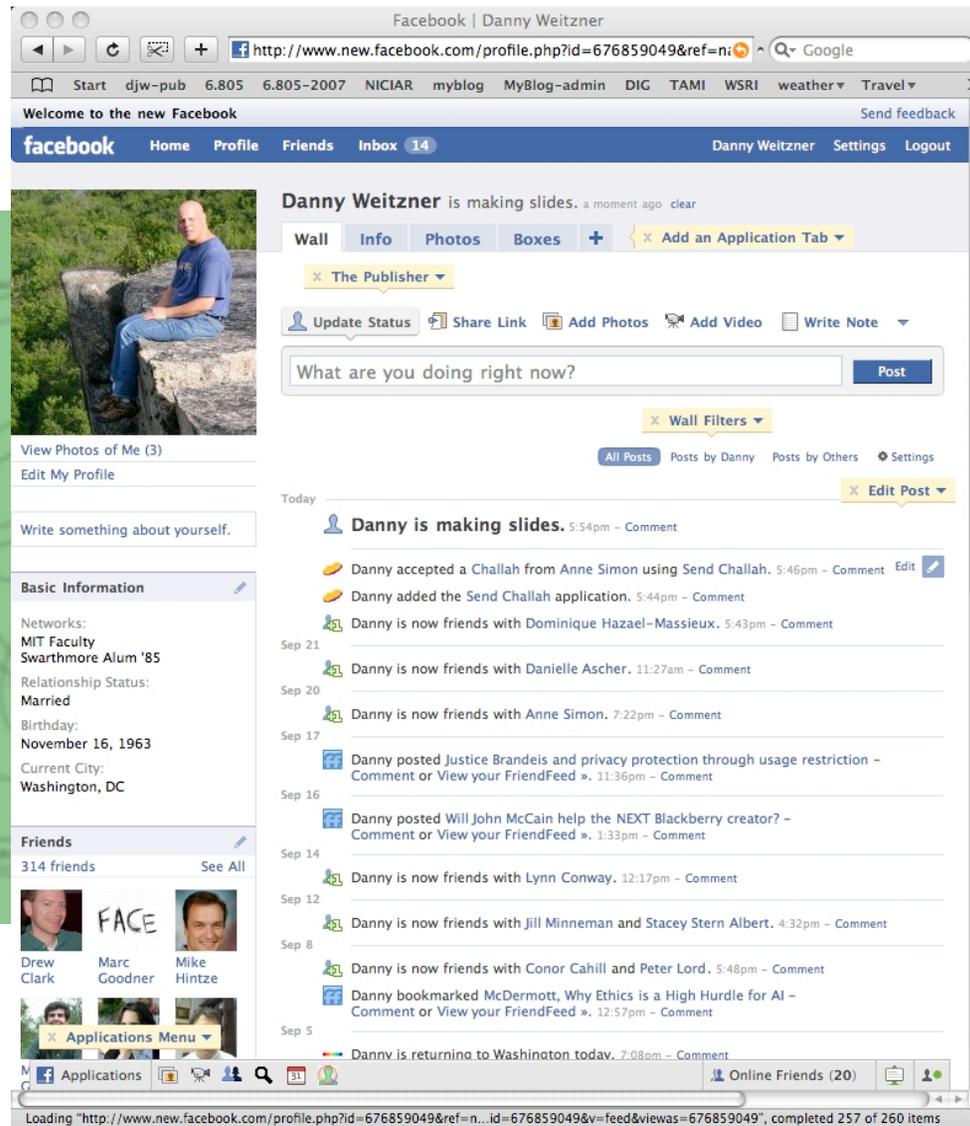

Re-thinking legal and technical approaches to privacy protection in the era of the Web

Center for Embedded Network Sensing
6th Annual Research Review
22 October 2008

Daniel J. Weitzner djweitzner@csail.mit.edu
MIT CSAIL Decentralized Information Group
<http://dig.csail.mit.edu/>

Getting over Scott McNealy

Motivation: Privacy in transparent environments

Mistree (2007)

How to get over 'getting over' privacy

- Step 1 – Drop the fig leaf: admit just how broken our legal and technical privacy tools actually are.
- Step 2 – Learn the lessons of accountability from other areas of law and society.
- Step 3 – Build Accountable Systems.
- Step 4 – Find new projects for cryptographers.

Step 1

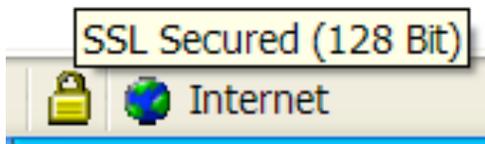

Drop the fig leaf: admit just how broken our legal and technical privacy tools actually are.

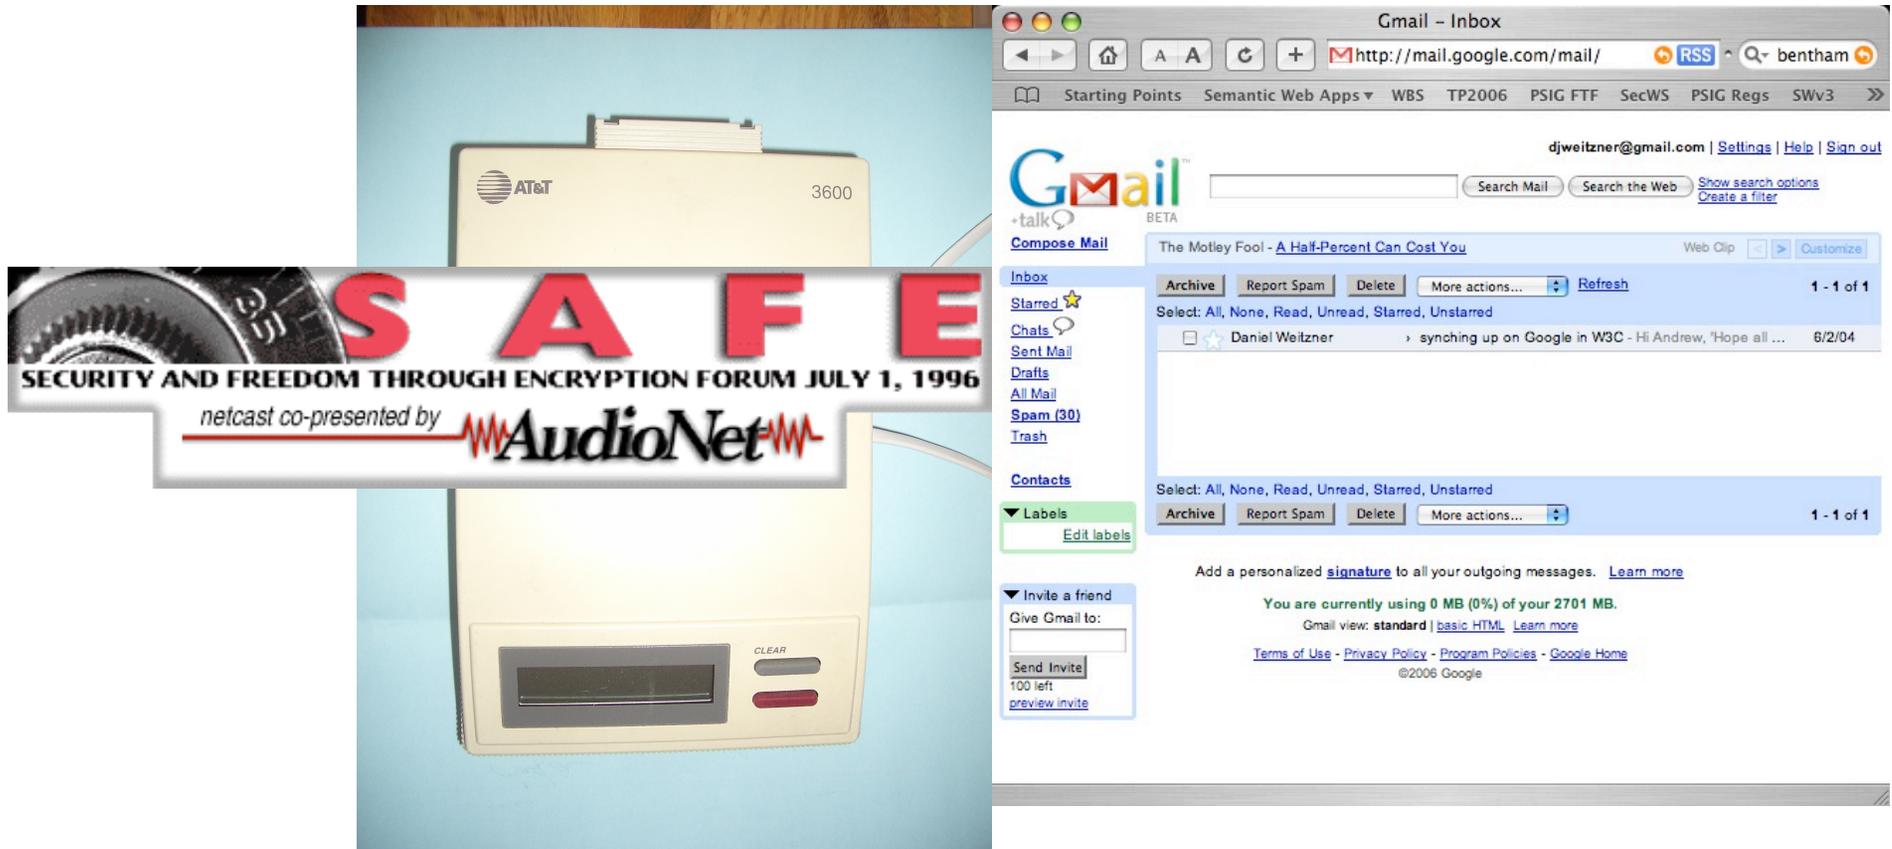

Privacy is the claim of individuals, groups, or institutions to determine for themselves when, how, and to what extent *information about them is communicated to others.*

Alan Westin, *Privacy and Freedom* (1967)

Saltzer/Schroeder (CACM 1974)

Changing Views of Privacy?

Shape of things to come

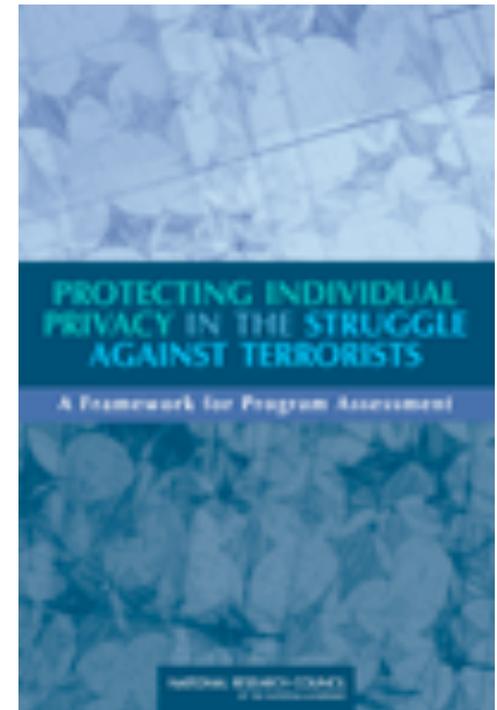

“GINA prevents health insurers from denying coverage, adjusting premiums on the basis of genetic information, or requesting that an individual undergo a genetic test. Similarly, employers are *prohibited from using genetic information* to make hiring, firing, or promotion decisions.”

Genetic Information Non-Discrimination Act of 2008

National Academy of Sciences

- Conclusion 5. The *current policy regime does not adequately address violations of privacy that arise from information-based programs* using advanced analytical techniques, such as state-of-the-art data mining and record linkage.
- Recommendation 2. The U.S. government should periodically review the nation's laws.... Such reviews should consider *establishment of restrictions on how personal information can be used*. Currently, legal restrictions are focused primarily on how records are collected and assessed, rather than on their use.

Protecting individual Privacy in the Struggle Against Terrorists
National Academy of Sciences, 2008.

New Approaches to Privacy Policy

“As president, Barack Obama will strengthen privacy protections for the digital age and will harness the power of technology to hold government and business **accountable** for violations of personal privacy....**Barack Obama supports restrictions on how information may be used and technology safeguards to verify how the information has actually been used.**”

TECHNOLOGY AND INNOVATION FOR A NEW GENERATION.

Sen. Barak Obama,

Feb. 2007

New definition of privacy

Privacy is the claim of individuals, groups, or institutions to determine for themselves when, how, and to what extent information about them is ~~communicated to~~ used by others.

Information Accountability

When information has been used, it should to possible to determine what happened, and to pinpoint use that is inappropriate

Weitzner et al. (CACM June 2008)

Step 2

*Learn the lessons of accountability from other areas
of law and society.*

Quiz

1. How many believe you are subject to law (any law)?
2. How many of you follow (most) laws? [exclude speed limits]
3. How many of you read all the laws to which you believe you are subject?
4. How many have been to a court of law?

Key finding: most of us follow rules even when we are able to violate them.

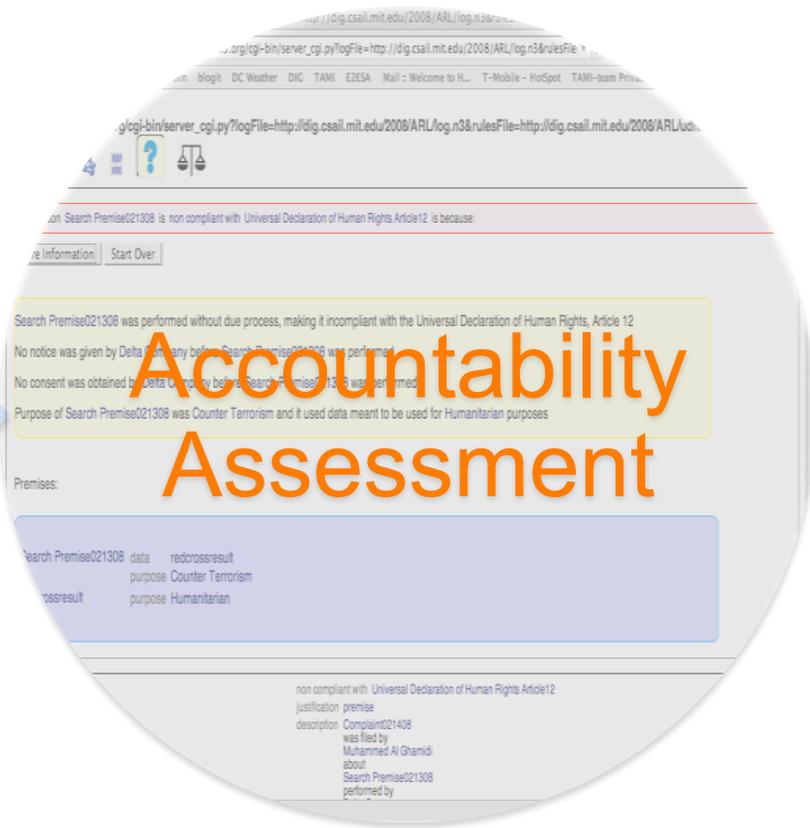

Regulatory Patterns for Large Scale Information Flows

- **Fair Credit Reporting Act**
 - Nearly unlimited information collection
 - Unlimited analysis
 - Strict **usage** limits
 - Harsh penalties for mis-use
 - Feedback loop to ensure accuracy
- **Securities Laws**
 - required reports
 - significant penalties for failure to file
 - virtually no review of substance of reports unless some stops trouble
 - criminal penalty for misreporting

Step 3
Build accountable systems.

Accountable Systems

Human-readable result

The screenshot shows a web interface for reasoning over logs and policies. The main content area displays a result for the log entry `Bettyrejectsbobsreq`, which is non-compliant with the `MA_Disability_Discrimination` policy. A red callout box points to this finding with the text: "Service denial violates anti-discrimination law".

The interface includes a sidebar on the left with the following sections:

- TAMISidebar**: Enter the log file and hit "Fetch Log". Log: `http://dig.csail.mit.edu/...` Fetch Log
- Enter the policy file and hit "Fetch Policy". Policy: `sail.mit.edu/TAMI/2007/...` Fetch Policy
- Optional: Enter the name of the output as (must be a URI have access to). Output: `http://localhost/myWeb`
- Select your preferred reasoner: Scheme Reasoner, Python Reasoner. Run Reasoner

The main content area shows the following details for the finding:

- g0**: justification premise
- g1**: description Bobsrequest was clearly not said using the customer351 was denied service because xphone record 2892
- g2**: justification antecedent sub expr

The justification for **g1** is detailed as follows:

- rule name: `g0`
- type: `And justification`
- sub expr: `g1`
- And justification details:
 - `Bobsrequest` instruction `bs request content` type `Request`
 - `bs request content` intended beneficiary type `Benefit Instruction`
 - `customer351` location `MA`

The justification for **g2** is detailed as follows:

- rule name: `g1`
- type: `And justification`
- sub expr: `g2`
- And justification details:
 - description: Health information like xphone record 2892 is not useful for Bettyrejectsbobsreq
 - justification antecedent sub expr

At the bottom of the page, the status is "Done" and the Zotero logo is visible.

Human-readable result with explanation

http://mr-burns.w3.org/cgi-bin/server CGI.py?logfile=http://dig.csail.mit.edu/TAMI/2007/s9/variation1/log.n3&rulesFile=http://dig.csail.mit.edu/TAMI/2007/s9/variation1/policy.n3

Enter the log file and hit "Fetch Log":
Log: http://dig.csail.mit.edu/TAMI/2007/s9/variation1/log.n3
Fetch Log

Enter the policy file and hit "Fetch Policy":
Policy: sail.mit.edu/TAMI/2007/s9/variation1/policy.n3
Fetch Policy

Optional: Enter the name of the output as (must be a URI have access to):
Output: http://localhost/myWeb

Bettyrejectsbobsreq is non compliant with MA_Disability_Discrimination policy

More Information | Start Over

Because:
Health information like xphone record 2892 is not useful for Bettyrejectsbobsreq

Premises:
Bettyrejectsbobsreq reason xphone record 2892
type Refuse Request
xphone record 2892 category Health Information

Justification:
non compliant with MA_Disability_Discrimination policy
justification premise
description Bobsrequest was clearly not said using the magic words customer351 was denied service because of xphone record 2892
justification antecedent expr sub expr g0

And justification
Bettyrejectsbobsreq reason xphone record 2892
receiver customer351
reply to Bobsrequest
type Refuse Request

rule name type g0
justification antecedent expr sub expr g1
Bobsrequest instruction bs type Re

Done zotero

Explanation: "illegal to use health information as a condition of delivering a public service"

"Service denial violates anti-discrimination law"

Copyright license compliance

▼ http://mr-burns.w3.org/cgi-bin/server.cgi.py?logFile=http://dig.csail.mit.edu/TAMI/2008/CreativeCommons/AIR_Rules/BY_log_non_compliant.n3&

rulesFile=http://dig.csail.mit.edu/TAMI/2008/CreativeCommons/AIR_Rules/BY_Policy.n3

Bad Photo User Embedding Creative Photographers Photo In Blog is non compliant with CC BY Policy

[More Information](#) [Start Over](#)

Bad Photo Users Blog has not given attribution to Creative Photographer. Therefore Bad Photo User Embedding Creative Photographers Photo In Blog is not compliant with the Creative Commons BY license terms.

Bad Photo User uses Creative Photo in his/her Bad Photo Users Blog.

Creative Photographer is the creator of the work Creative Photo which is protected under the Creative Commons BY License.

Premises:

Bad Photo User Embedding Creative Photographers Photo In Blog	type	Use Event
Creative Photo	license	BY License
	1.1creator	Creative Photographer
	type	Work
Creative Photographer	type	http://xmlns.com/foaf/0.1/Person

“Use of photo violates license because no attribution found”

Dependency Tracking

- AIR: rule-based policy language for usage rules and access control
- integrated explanations for policy decisions through **dependency tracking**
- Truth Maintenance System (TMS)
 - track of the logical structure of a derivation
 - ability to assume and retract hypothetical premises
 - more efficient and expressive reasoning through the use of **goal direction**
- grounded in Semantic Web technologies for greater interoperability, reusability, and extensibility

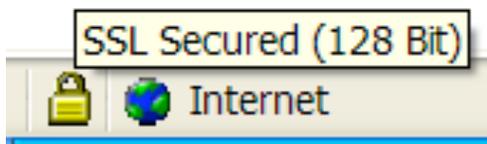

Step 4

*Find new jobs for computer security researchers
(besides privacy protection). ☺*

Limits of cryptographic security for privacy protection

- Rules must be susceptible enforcement by a priori action
- Application of rules to ground facts must be automatically decidable without human intervention

Anti-formalism: lessons from the software verification debate

"[T]he proof of a theorem is a message", not a formal abstraction that ties it completely and irrefutably to ground truths.

De Millo, Lipton, Perlis, "Social Processes and Proofs of Theorems and Programs." CACM, May 1979 (Vol. 22 No. 5), p. 271

- **Proofs gain support by**
 - Readability
 - Peer review
 - Effectiveness in the mathematical world
- **But software verifications**
 - Can't be read
 - Are inherently complex beyond human explanation

Source of confidence in anti-formalist world view

Common Mistake

- Seeking perfect *a priori* enforcement of legal/social rules
- Attempting to design formally verifiable system

Accountable Systems

- Seek simplicity over perfection
- Provide human-accessible explanation
- Create communicable basis for community acceptance

Coda: Harvard Personal Genetics Project

“Developments in both medical informatics and bioinformatics show that the guarantee of *absolute privacy and confidentiality is not a promise that medical an scientific researchers can deliver* any longer.”

“[B]uilding of any comprehensive genotype–phenotype data collection requires that the individuals be fully aware that the *data can be and likely will be accessed, shared and linked* to other sets of information, and that the *full purpose and the extent of further usage cannot be foreseen*.

“From genetic privacy to open consent,” Nature Review Genetics 9, 406-411 (May 2008)
