

Augmenting the Web with Accountability

Oshani Seneviratne

PhD Candidate, Decentralized Information Group, MIT

Advisor: Tim Berners-Lee

PhD Symposium at WWW2012

Agenda

- Motivation
- Proposed Approach
- Methodology & Evaluation
- Challenges

Agenda

- **Motivation**
- Proposed Approach
- Methodology & Evaluation
- Challenges

Accountability on the Web?

Accountability on the Web?

- Controlling access has been the de-facto method for protecting information in computer systems

Accountability on the Web?

- Controlling access has been the de-facto method for protecting information in computer systems
- But information can leak even though there are strict access control mechanisms

Accountability on the Web?

- Controlling access has been the de-facto method for protecting information in computer systems
- But information can leak even though there are strict access control mechanisms
- We need accountability to **supplement** access control on the Web [*Weitzner et al, 2008*]

Unintended Consequences from Private Information Leakages on the Web

Unintended Consequences from Private Information Leakages on the Web

Copyright Infringements

Copyright Infringements

Goals

Goals

- Enable **provenance** of web resources

Goals

- Enable **provenance** of web resources
- Prevent **unintended consequences** from misusing information on the web

Goals

- Enable **provenance** of web resources
- Prevent **unintended consequences** from misusing information on the web
- Enable reuse of web content in a **progressive policy aware manner**

Agenda

- Motivation
- **Proposed Approach**
- Methodology & Evaluation
- Challenges

HTTPA

(HTTP with Accountability)

HTTTPA

(HTTP with Accountability)

- Secure Protocol

HTTTPA

(HTTP with Accountability)

- Secure Protocol
- Has Auditing Capability

HTTTPA

(HTTP with Accountability)

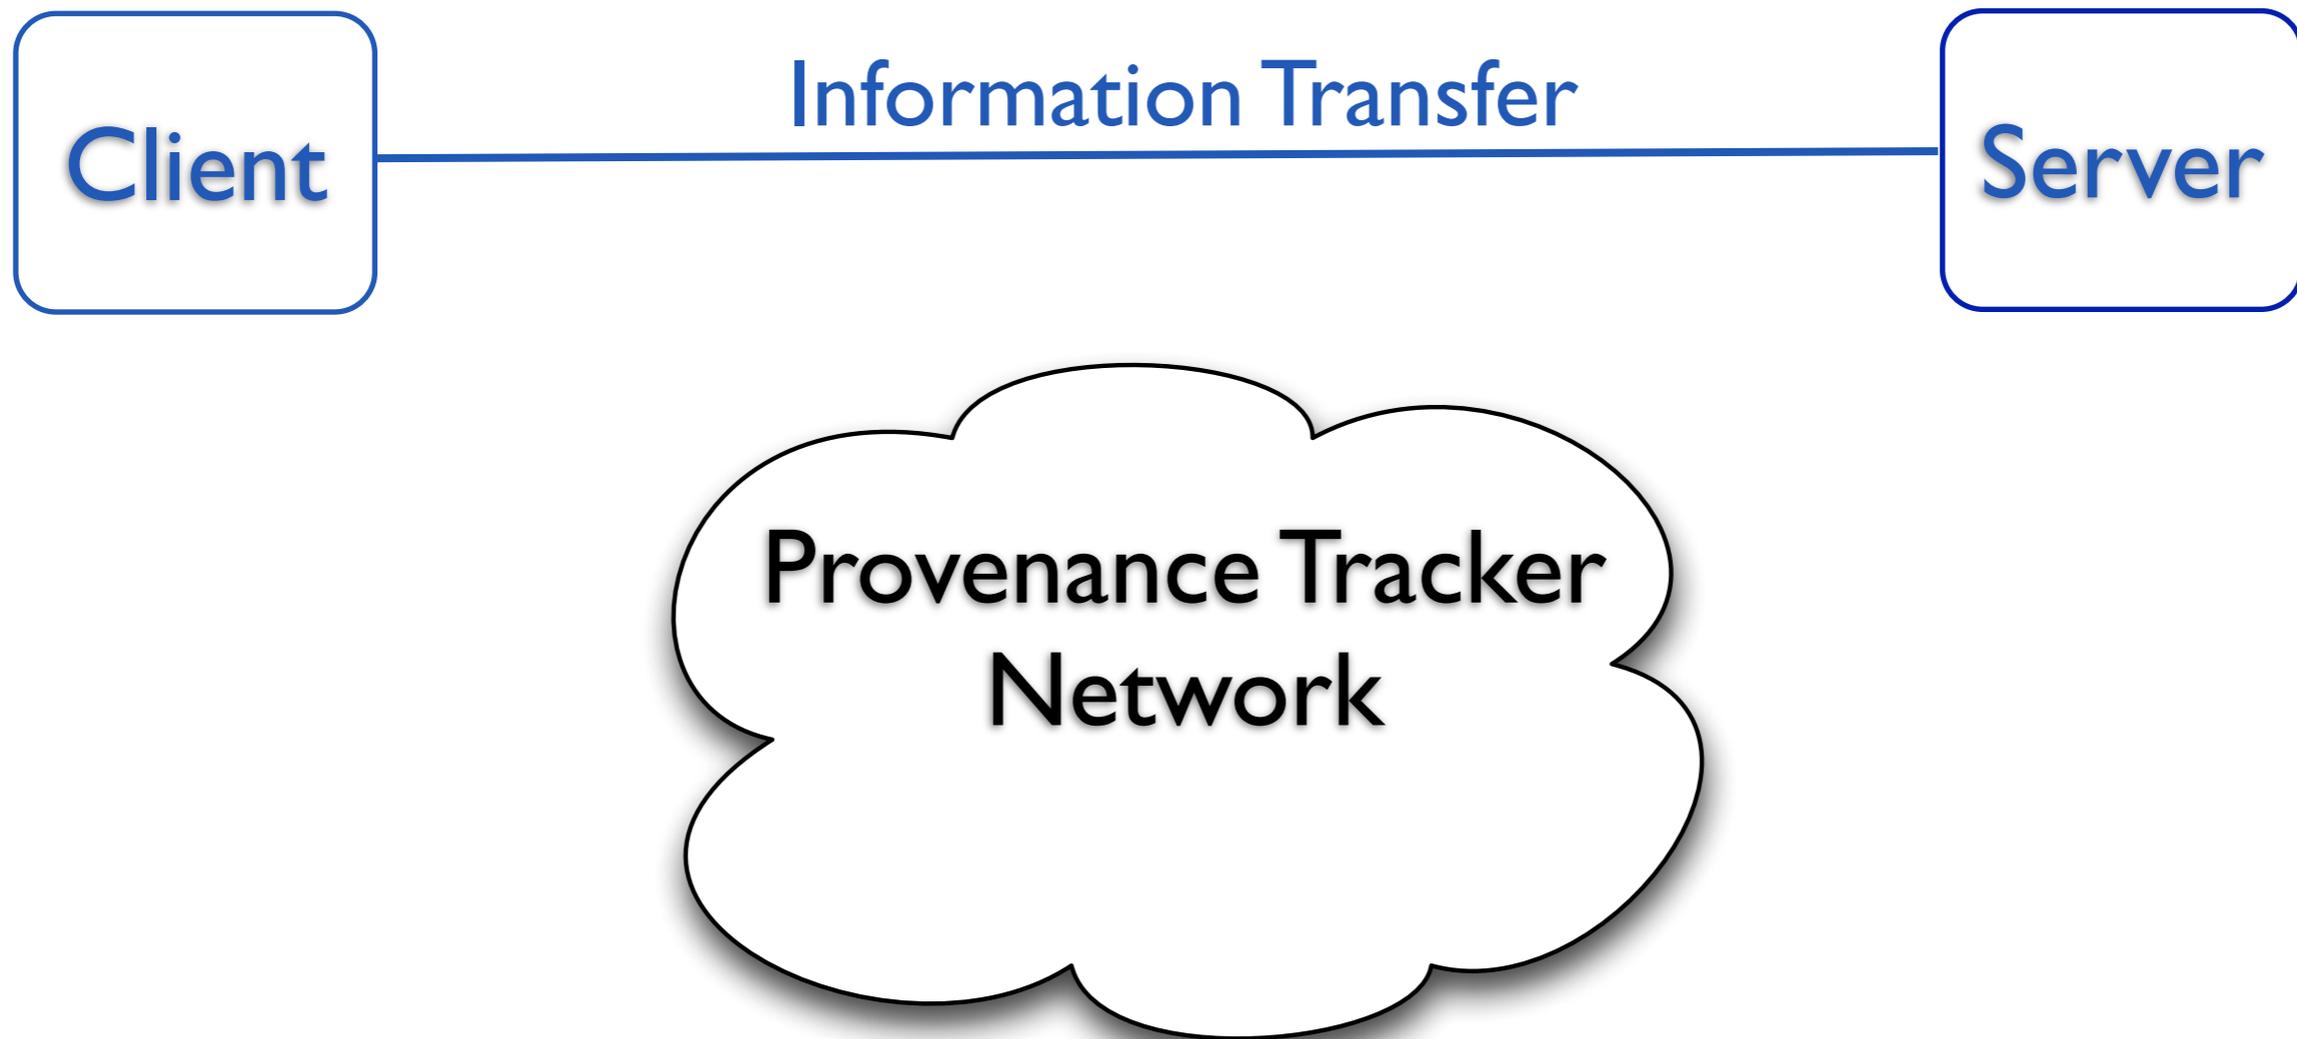

- Secure Protocol
- Has Auditing Capability
- Extensible Privacy and Reuse Restrictions

HTTPPA in a Nutshell

Protocol Components

- Authentication
- Usage Restriction Specification
- Provenance Tracker Network
- Smart Clients
- Accountability Checking

Authentication

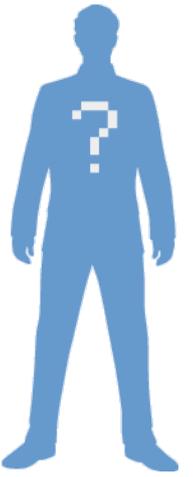

Authentication

- For:
 - Authenticity
 - Access Control
 - Auditing

Authentication

- For:
 - Authenticity
 - Access Control
 - Auditing
- Implemented using the WebIDs

Usage Restrictions

Your Data is Used Only for
the Intended Use

Usage Restrictions

Your Data is Used Only for
the Intended Use

- Default Terms Supported:
 - Read
 - Read+Embed
 - Read+Copy

Usage Restrictions

Your Data is Used Only for
the Intended Use

- Default Terms Supported:
 - Read
 - Read+Embed
 - Read+Copy
- The current implementation handles the Respect My Privacy (RMP) ontology

Provenance Tracker Network (PTN)

Provenance Tracker Network (PTN)

- Maintains the accountability logs for web resources

Provenance Tracker Network (PTN)

- Maintains the accountability logs for web resources
- Trusted Service

Provenance Tracker Network (PTN)

- Maintains the accountability logs for web resources
- Trusted Service
- Experimental PTN deployed on PlanetLab

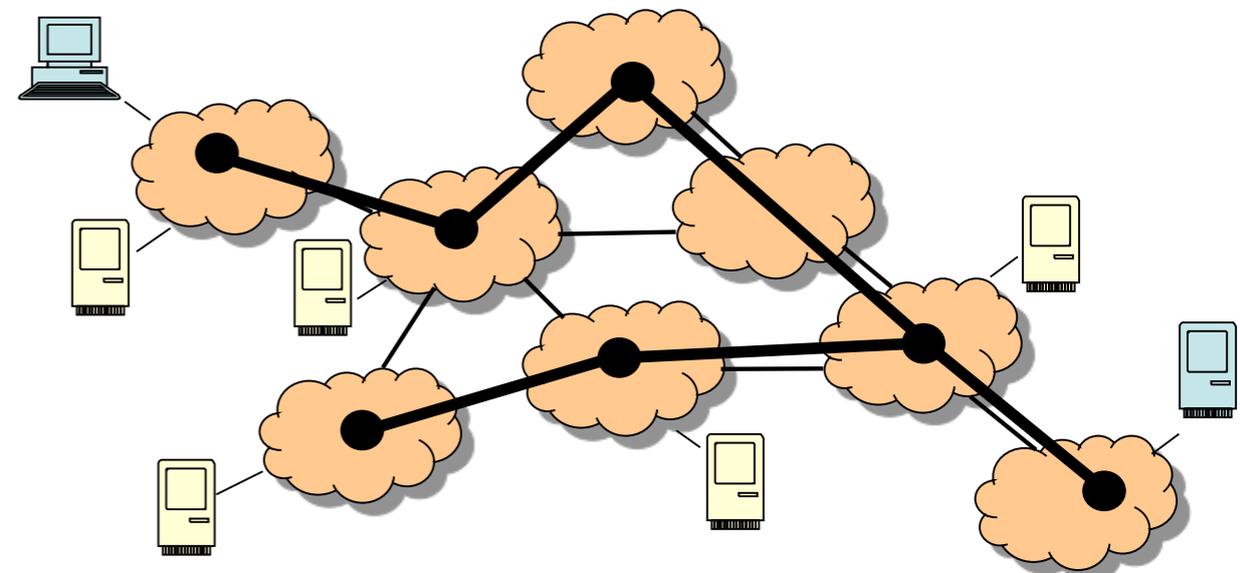

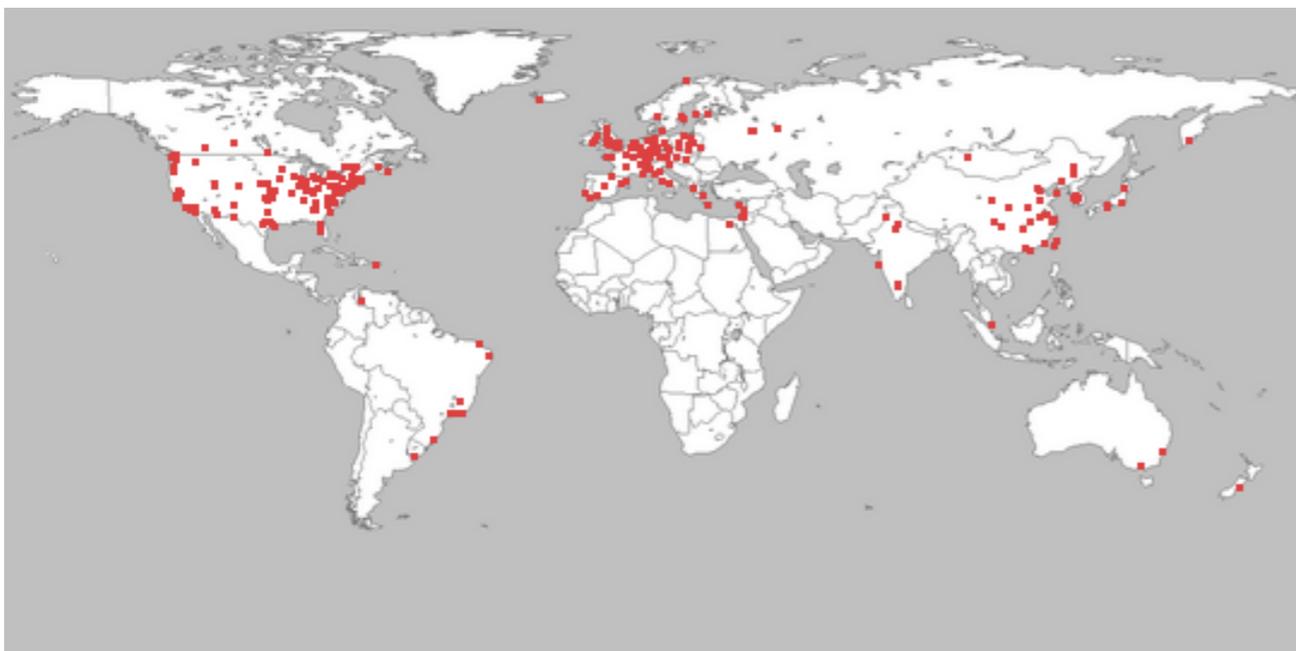

Provenance Tracker Network (PTN)

- Maintains the accountability logs for web resources
- Trusted Service
- Experimental PTN deployed on PlanetLab

Provenance Tracker Network (PTN)

- Maintains the accountability logs for web resources
- Trusted Service
- Experimental PTN deployed on PlanetLab

Smart Clients

Smart Clients

- **Manages the user's intentions for accessing generic web resources**

Smart Clients

- **Manages the user's intentions for accessing generic web resources**
- **Displays the Usage Restrictions set on the content access**

Smart Clients

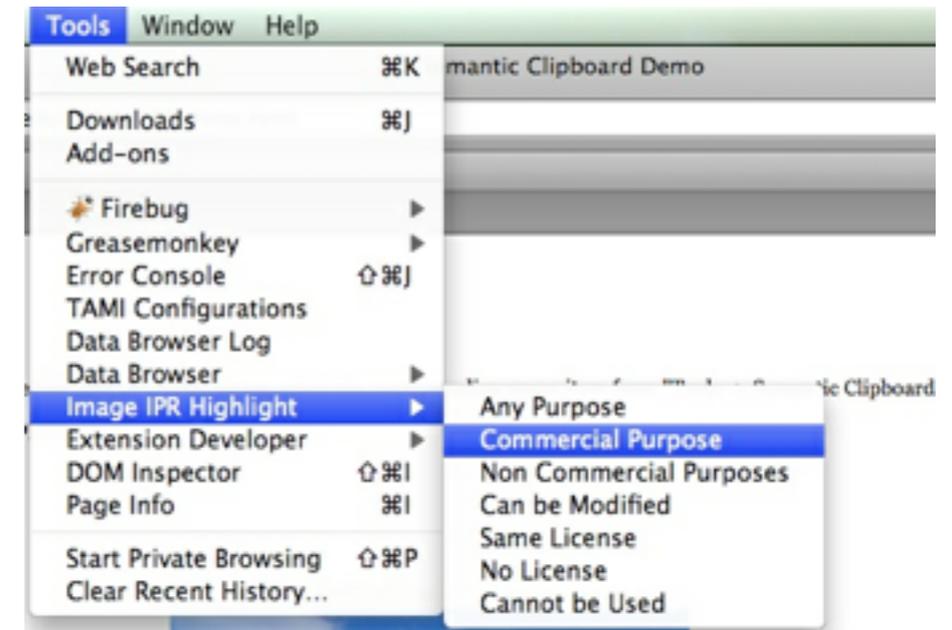

- **Manages the user's intentions for accessing generic web resources**
- **Displays the Usage Restrictions set on the content access**
- **Preserves the provenance and rights information**

Smart Clients

- Manages the user's intentions for accessing generic web resources
- Displays the Usage Restrictions set on the content access
- Preserves the provenance and rights information
- Implemented as browser based plugins

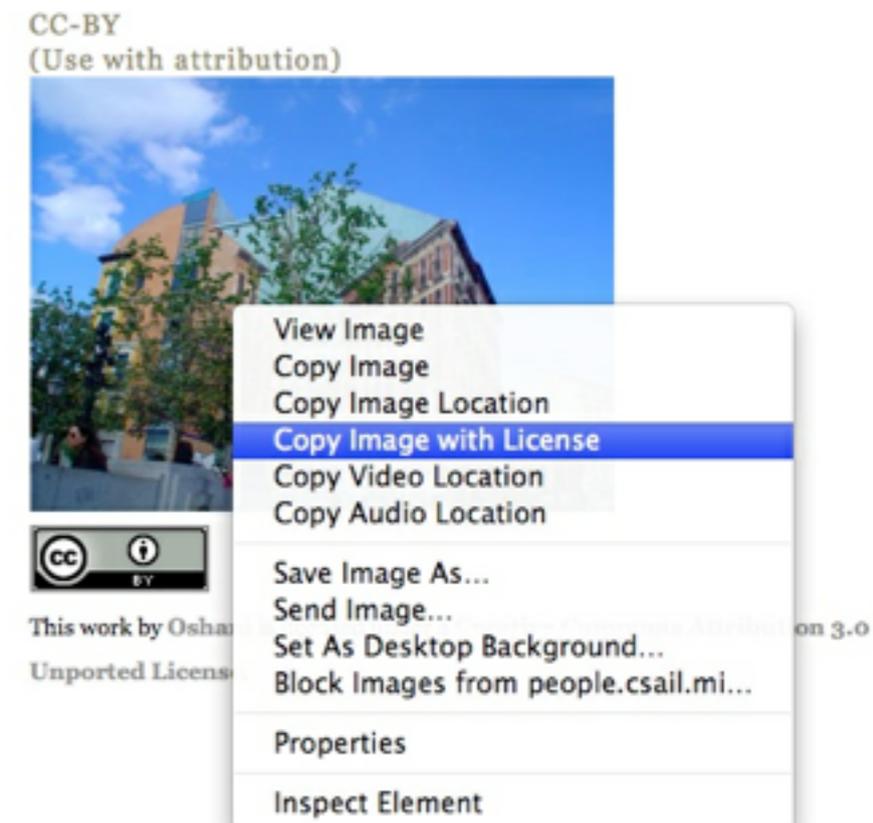

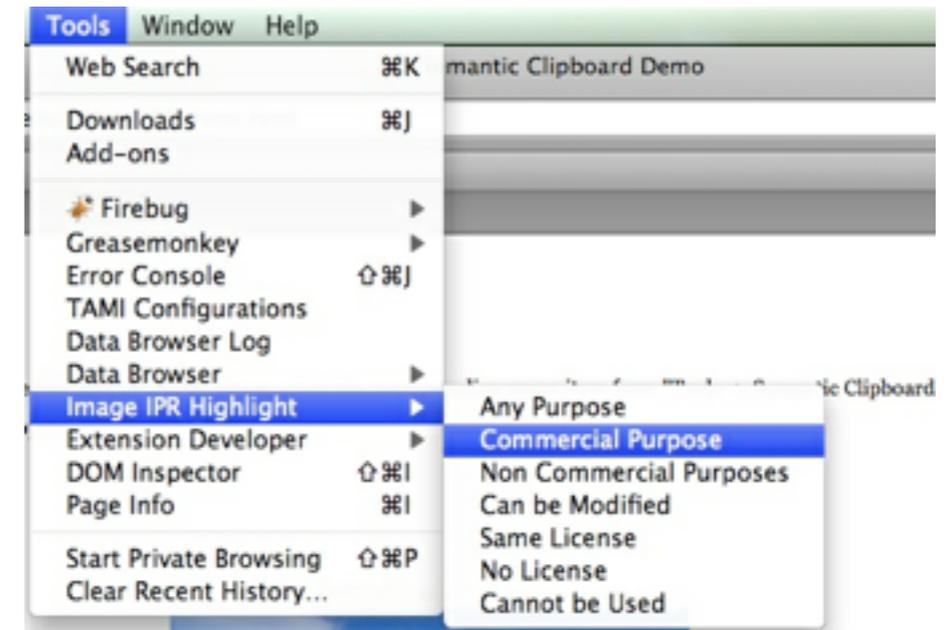

Smart Clients

- Manages the user's intentions for accessing generic web resources
- Displays the Usage Restrictions set on the content access
- Preserves the provenance and rights information
- Implemented as browser based plugins

Smart Clients

- Manages the user's intentions for accessing generic web resources
- Displays the Usage Restrictions set on the content access
- Preserves the provenance and rights information
- Implemented as browser based plugins

Accountability Checking

Accountability Checking

- A rights owner for some web content can request the PTN for the following information:
 - Usage of their web resources
 - Adherence to their usage restriction terms

Accountability Checking

- A rights owner for some web content can request the PTN for the following information:
 - Usage of their web resources
 - Adherence to their usage restriction terms
- PTNs provide an ‘audit trail’ with:
 - URIs of original resources
 - The identity of the violator

Agenda

- Motivation
- Proposed Approach
- **Methodology & Evaluation**
- Challenges

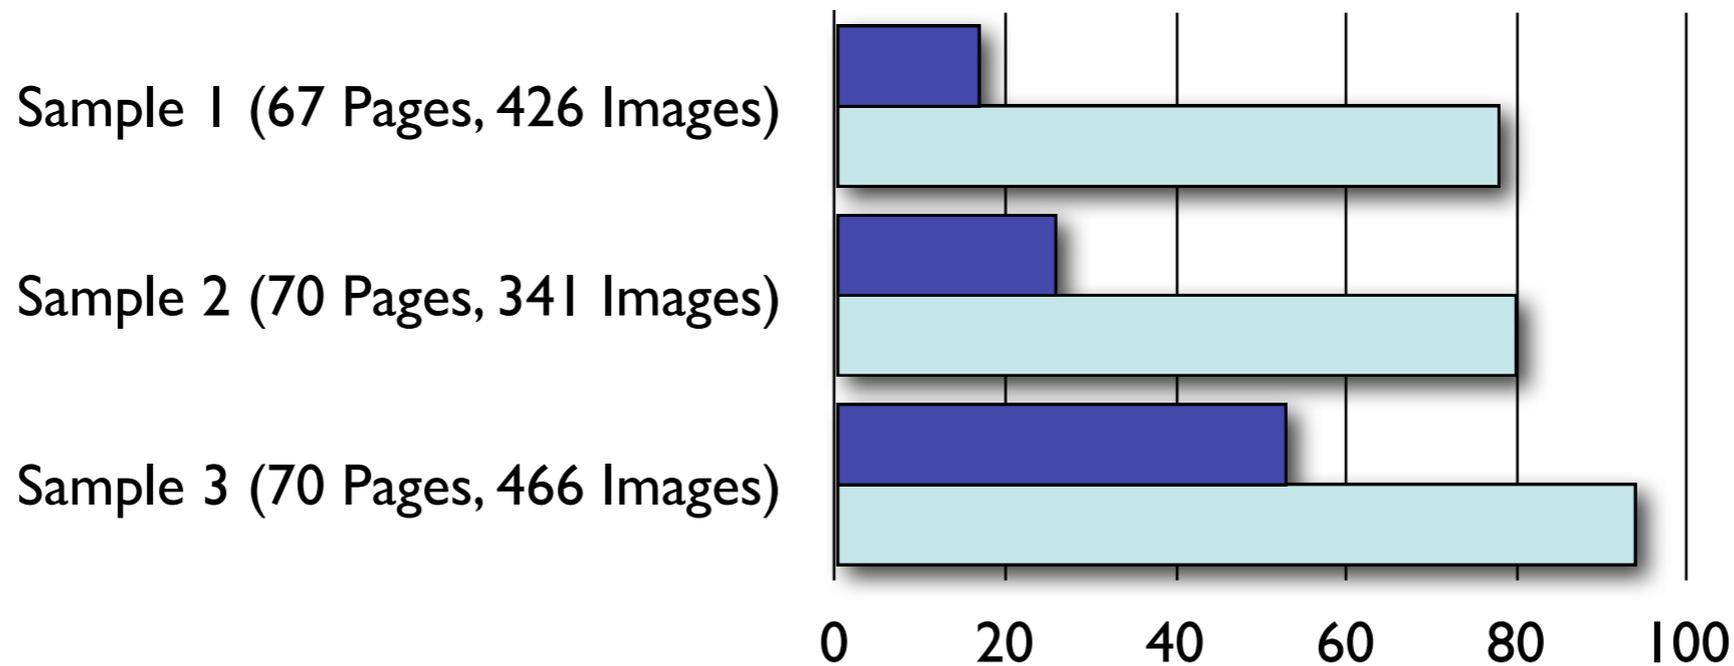

Studies on Content Reuse on the Web

Studies on Content Reuse on the Web

- Flickr study revealed CC license violations ranging from 78% - 94% on Flickr Images [*Seneviratne, Kagal and Berners-Lee ISWC 2009*]

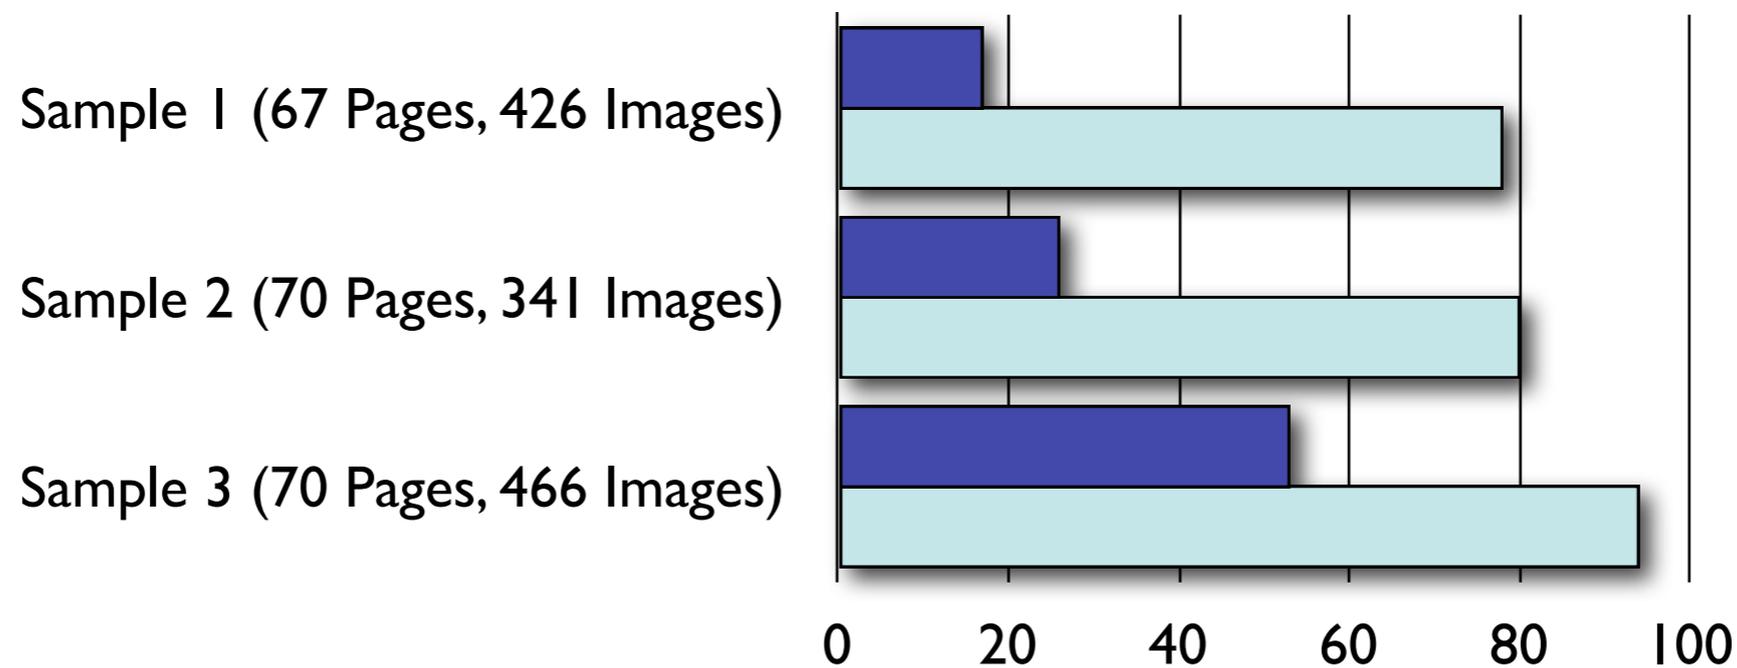

Studies on Content Reuse on the Web

- Flickr study revealed CC license violations ranging from 78% - 94% on Flickr Images [*Seneviratne, Kagal and Berners-Lee ISWC 2009*]

Studies on Content Reuse on the Web

- Flickr study revealed CC license violations ranging from 78% - 94% on Flickr Images [*Seneviratne, Kagal and Berners-Lee ISWC 2009*]

- Survey study on user generated content websites [*Seneviratne, Monroy-Hernandez WebSci 2010*]

Implementation

Implementation

- Usage Restriction Management on Web Resources
[Seneviratne, Kagal IEEE Policy 2011]

Implementation

- Usage Restriction Management on Web Resources
[Seneviratne, Kagal IEEE Policy 2011]
- Initial PTN deployment on PlanetLab

Implementation

- Usage Restriction Management on Web Resources
[Seneviratne, Kagal IEEE Policy 2011]
- Initial PTN deployment on PlanetLab
- Ongoing protocol implementation work (see *<http://dig.csail.mit.edu/hg/httpa>*)

Planned HTTPA Trials

Planned HTTPPA Trials

- Library of Congress information resource management of their “Born Digital” collection

Planned HTTPPA Trials

- Library of Congress information resource management of their “Born Digital” collection
- HTTPPA to reward long tail content creators with the **TipSy** and **Emancipay** projects

Planned HTTPPA Trials

- Library of Congress information resource management of their “Born Digital” collection
- HTTPPA to reward long tail content creators with the **TipSy** and **Emancipay** projects
- Prototype Social Networking Site

Agenda

- Motivation
- Proposed Approach
- Methodology & Evaluation
- **Challenges**

Privacy

Privacy

- Use of HTTPPA does not mean giving up pseudonymity or anonymity

Privacy

- Use of HTTPPA does not mean giving up pseudonymity or anonymity
 - **Anonymizing Agents** will preserve the identity of the user

Privacy

- Use of HTTPPA does not mean giving up pseudonymity or anonymity
 - **Anonymizing Agents** will preserve the identity of the user
- Tracking provenance: Is this the end of privacy?

Privacy

- Use of HTTPPA does not mean giving up pseudonymity or anonymity
 - **Anonymizing Agents** will preserve the identity of the user
- Tracking provenance: Is this the end of privacy?
 - Accountability will ensure the preservation of privacy in the long run

Scaling Up

Scaling Up

- Hierarchical PTN Infrastructure

Scaling Up

- Hierarchical PTN Infrastructure
- Organizations can run their own PTN, much like mail servers, certificate authorities, etc

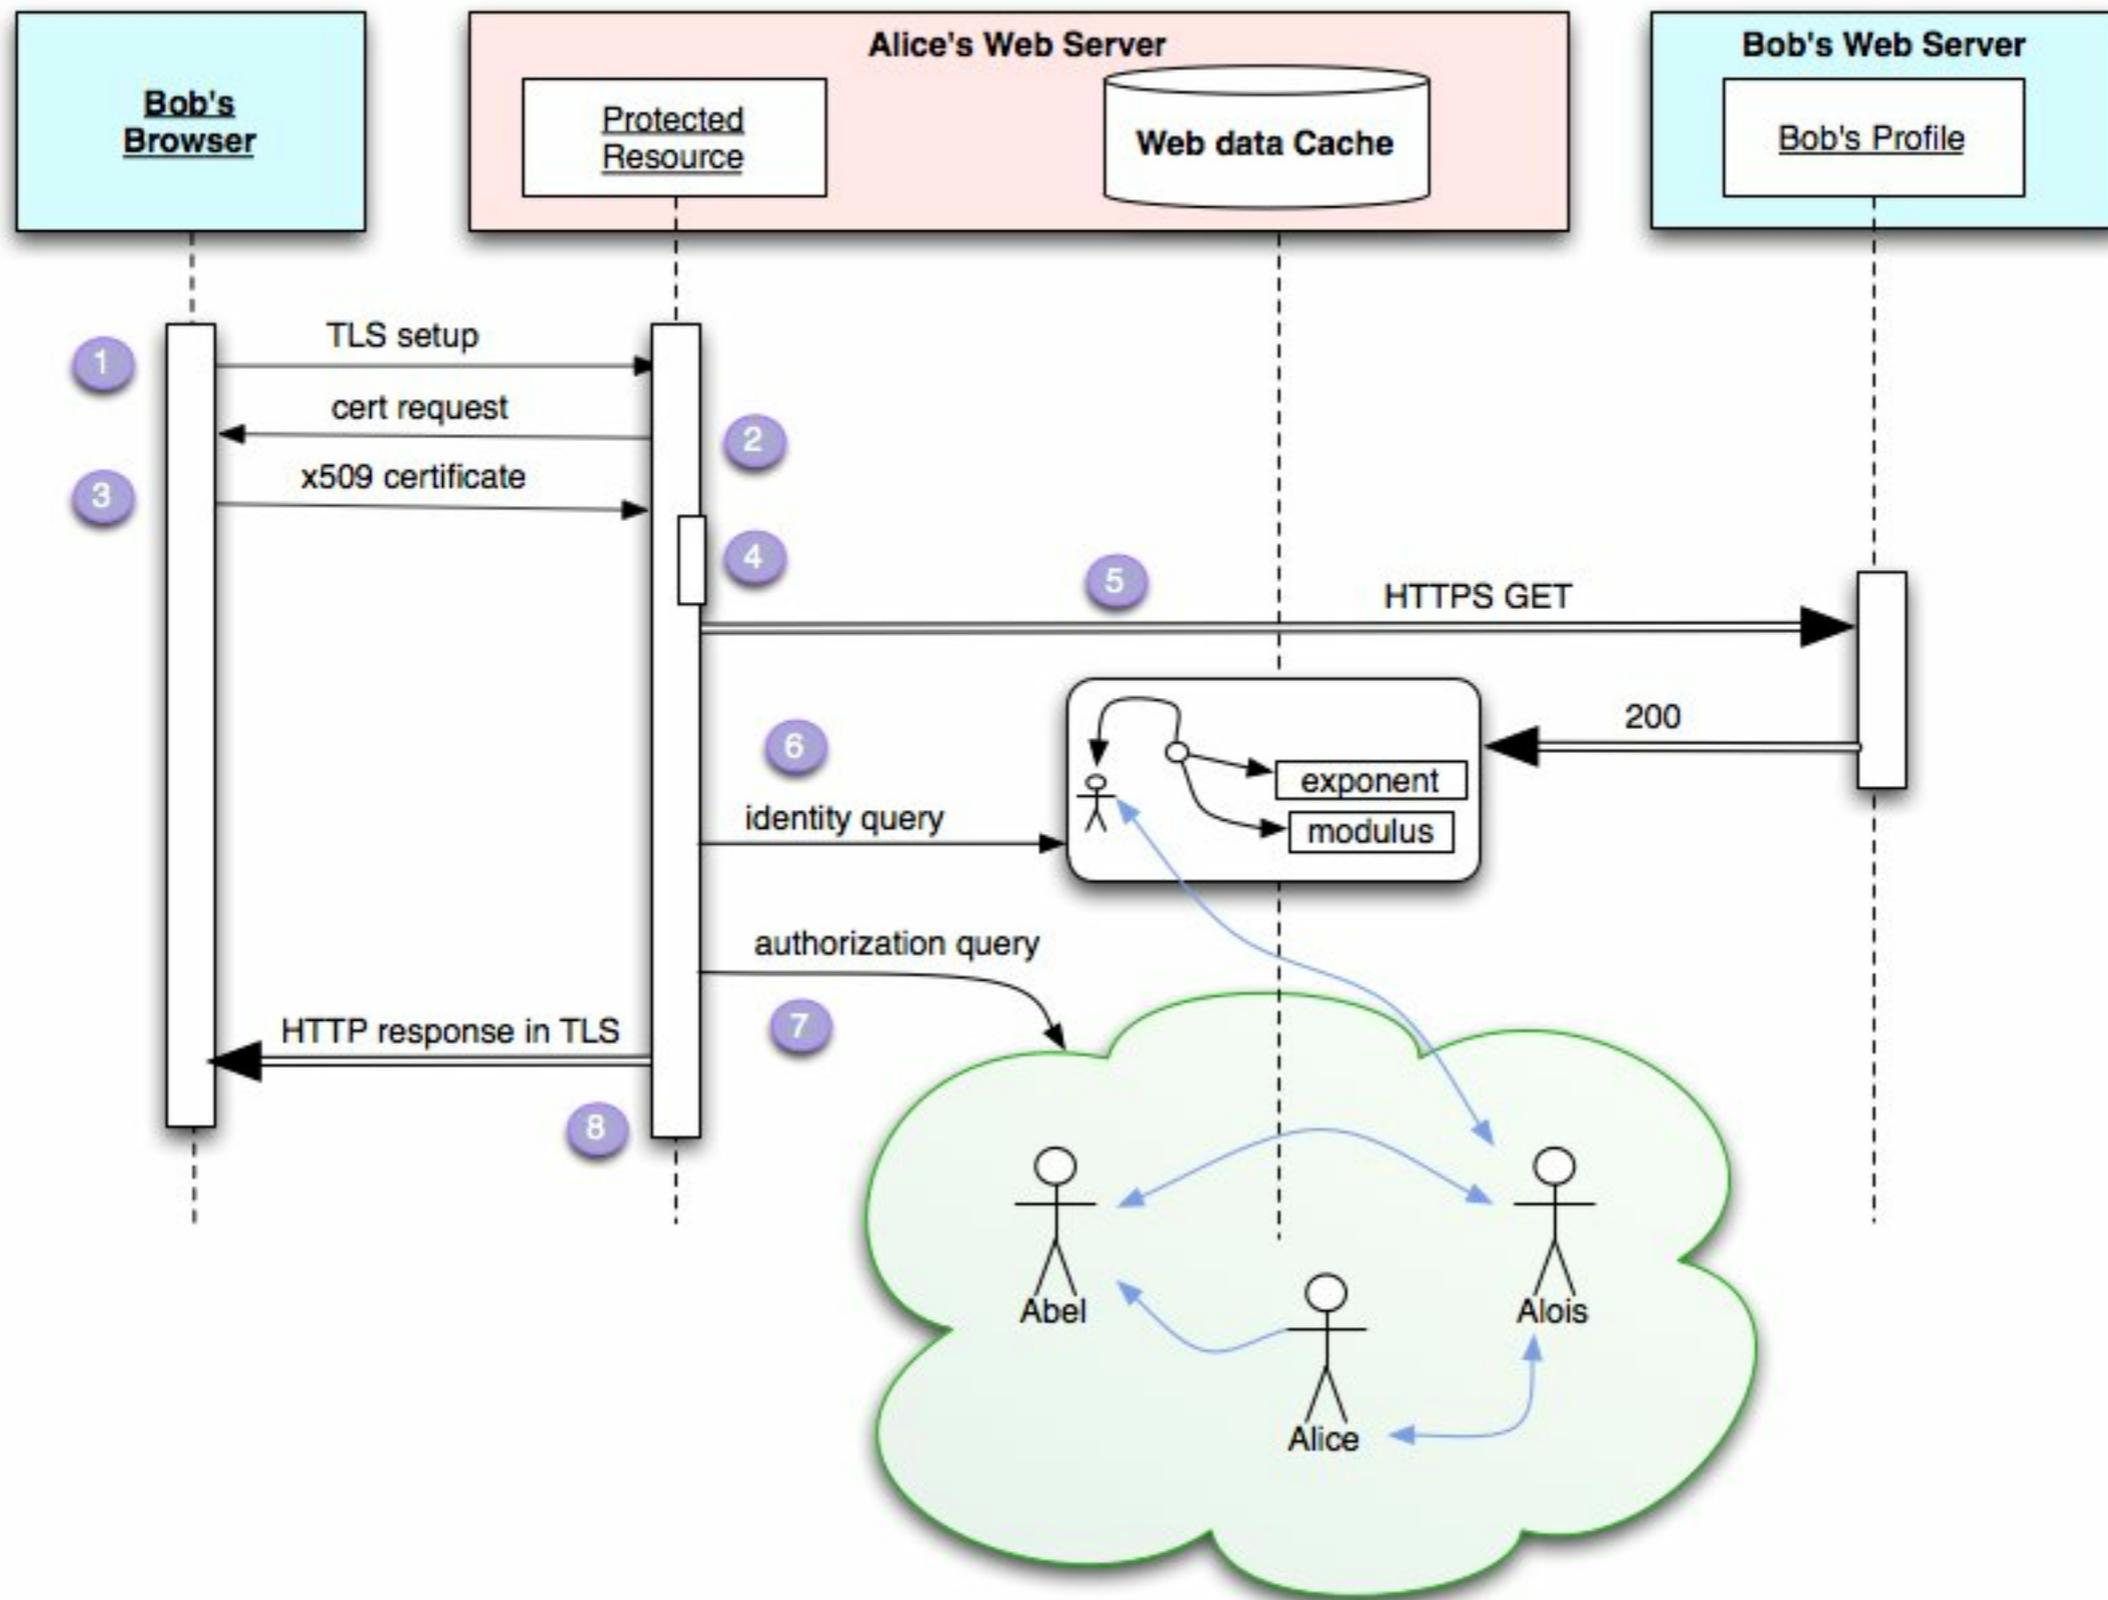

Thank You!
